# AUTOMATED EGGPLANT SORTING AND GRADING SYSTEM USING COMPUTER VISION AND MACHINE LEARNING FOR QUALITY CLASSIFICATION

## An Undergraduate Thesis

Presented to the Faculty of Bachelor of Science in Computer Engineering University of Science and Technology of Southern Philippines Cagayan de Oro City

In Partial Fulfillment
of the Requirements for the Degree of
BACHELOR OF SCIENCE IN COMPUTER ENGINEERING

ALEXANDRA E. JAGONOS
MARK MADORABLE
RALPH B. GALANIDO
JIHARA MAE B. APUT
JONAS RON FRANCO P. MALAZARTE

November 2025

#### APPROVAL SHEET

This Thesis entitled: "AUTOMATED EGGPLANT SORTING AND GRADING SYSTEM USING COMPUTER VISION AND MACHINE LEARNING FOR QUALITY CLASSIFICATION", prepared and submitted by ALEXANDRA E. JAGONOS, MARK MADORABLE, RALPH B. GALANIDO, JIHARA MAE B. APUT, and JONAS RON FRANCO P. MALAZARTE in partial fulfillment of the requirements for the degree of **BACHELOR OF SCIENCE IN COMPUTER ENGINEERING** has been examined and approved.

## Engr. Darwin Jone H. Jupiter Adviser

#### PANEL OF EXAMINERS

Approved by the committee on Oral Examination with a grade of **PASSED**.

Engr. Darwin Jone H. Jupiter
Chair

Engr. Jasper Jay A. Jementiza
Member

 $\frac{\text{Mrs. Mirasol D. Rizon}}{\text{Member}}$ 

Approved and accepted in partial fulfillment of the requirements for the degree **BACHELOR OF SCIENCE IN COMPUTER ENGINEERING**.

Approved:

Dr. Israel A. Baguhin

Dean, College of Engineering and Architecture

## ABSTRACT

This study...

Keywords: computer vision, grading system, eggplant classification

This piece of work is wholeheartedly dedicated to my parents

Papang

 $oldsymbol{Nanay}^{and}$ 

#### ACKNOWLEDGMENT

I would like to express my gratitude to the following people and institutions which, in one way or another, greatly contributed towards the completion of this study.

To my adviser *Engr. Jodie Rey D. Fernandez* for painstakingly checking every detail of this paper. I am extremely thankful and indebted to you Sir for sharing your expertise and valuable guidance. Had not of your encouragement and moral support, this endeavor would surely fall to a complete obscurity.

To my panel members, *Engr. Mark Lister V. Nalupa* and *Engr. Miriam M. Bergado* for sharing your knowledge and diligently spending your time in giving valuable insights, corrections and suggestions for the betterment of this study. I have high regards to both of you.

To the faculty and staff of the **Department of Computer Engi- neering** for your encouragement and support.

To my classmates, *Methos*, *Shirley*, *Lovely*, *Lady Lee*, *Cris*, and *Ma'am Bern* for sharing your laughter and wonderful moments with me. Finally, sleepless nights and tiring days are over but they are all worth it.

To my friends, Ruemar, Chyn, Vine, Abigail, Rachel, Long, Elaine, Claire, Allan, Xander, Laiza, Ate Leslie, Sir Greig, Jean, Sir Harold, Ate Josh, Ma'am Amelia, Jovy, Leonel, Jerson, Sir Raymund, Sir Nur P., Mama Marge, Mama Belle, Mama Lady, Mama Hazel, Brother Mark, Sir Nur, Sir Elmer and to my AHK Family for your prayers and moral support. You all made this journey worthy of remembering.

To my family, Nanay Angga, Papang Willy, Nanay Toto, Ina, Ate Love, Ate Ging, Kuya Boboy, Andi, Marlo and Ate Lyn for your unceasing love, moral and financial support. All of you are my inspirations which constantly remind me of not giving up amidst difficulties and uncertainties.

And to those people I failed to mention, who directly or indirectly, lent their hands, extended their prayers and support for the completion of this study.

Above all, to our *Almighty God*, whose unconditional love infinitely transcends all human comprehensions, provides us with good health, divine protection and bountiful blessings.

Jodie

#### INTRODUCTION

Dual – mode telemetry presents new ability to the UAV communication creating a new way of handling disconnection and fail safe protocol. This research may solve the occlusion problems with the radio frequency communication and the handshaking problems in the mobile network connection.

This paper is dedicated to present the concept of the integrated communication system for UAV (Unmanned Aerial Vehicle) data and telemetry transmission. The aim of this paper is to present a working prototype UAV with working dual mode communication that involves the telemetry, FPV (First – Person View), and the RC (Remote Control). In the paper, both the concept of the system and elements of its realization are presented. (Bhattacharya and Raj, 2004)

According to (Fuller et al., 2014) ...

## 1.1 Background of the Study

Telemetry, derived from the Greek roots "tele" (remote) and "metron" (measure), is the process of recording and transmitting the readings of instruments and devices from remote or inaccessible points to an IT system in a

different location for monitoring and analysis. This technology has become a cornerstone in various fields such as aerospace, healthcare, environmental science, and industrial applications due to its ability to provide real-time data monitoring, diagnostics, and predictive maintenance (Butcher and Stewart, 2014).

The primary function of telemetry systems is to collect data from sensors and transmit it to a centralized system for analysis. This process involves several key components: sensors to capture data, transmitters to send the data, receivers to collect the data, and a central processing unit to analyze and store the data. With the advent of the Internet of Things (IoT) and advancements in wireless communication technologies, telemetry has evolved significantly, enabling more efficient and comprehensive data acquisition and monitoring systems.

In aerospace, telemetry is crucial for monitoring the status and health of spacecraft and satellites, providing data on parameters such as temperature, pressure, and velocity. In healthcare, telemetry systems are used to monitor patients' vital signs remotely, allowing for timely medical interventions and reducing the need for prolonged hospital stays. Environmental telemetry systems play a pivotal role in tracking weather conditions, pollution levels, and natural disaster warnings, contributing to better disaster management and

environmental protection.

The integration of telemetry in industrial applications has revolutionized how industries operate. Through real-time monitoring of machinery and processes, industries can minimize downtime, optimize performance, and enhance safety. Predictive maintenance, powered by telemetry data, allows for the identification of potential issues before they lead to failures, thereby reducing maintenance costs and improving operational efficiency.

This paper aims to explore the advancements in telemetry technology, its applications across various fields, and the future trends that could shape its development. By understanding the current state and potential of telemetry, we can better appreciate its critical role in modern technology and its impact on improving operational efficiencies and safety across different sectors.

## 1.2 Statement of the Problem

This study seeks to investigate some properties of decomposable hyper KS-semigroups in the context of strong, weak, quasi- and bi-hyper KS-ideals.

## 1.3 Objectives of the Study

In view of the above stated problem, we have the following objectives:

1. To introduce the concept of strong, weak, quasi- and bi-hyper KS-ideals;

- 2. To provide characterizations of strong, weak, quasi- and bi-hyper KS-ideals and investigate their relationships;
- 3. To introduce the idea of decomposable hyper KS-semigroups and give some characterizations.

## 1.4 Significance of the Study

The concept of hyperstructures is itself, a powerful mathematical tool since algebraic hyperstructures seem to occur very naturally in many areas of mathematics and even in other disciplines.

## 1.5 Scope and Limitations

The primary motivation of this study lies within the structural properties of hyper

## 1.6 Definition of Terms

- **Data Logger** An electronic device that records data over time or in relation to location either with a built-in instrument or sensor or via external instruments and sensors.
- **GPS Tracking** Using the Global Positioning System to determine and track the precise location of a person, vehicle, or other asset.

- **Real-time Monitoring** The process of continuously observing a system or process and immediately reporting any changes or anomalies.
- **Sensor** A device that detects or measures a physical property and records, indicates, or otherwise responds to it.
- **Telemetry** The process of recording and transmitting the readings of an instrument.
- Wireless Communication The transfer of information between two or more points that are not connected by an electrical conductor.

## REVIEW OF RELATED LITERATURE

This chapter presents some preliminary concepts and known results that are needed in this study.

## 2.1 Preliminary Concepts and Results

This section contains some basic definitions.

## **METHODOLOGY**

In this chapter, we detail the methodology employed to conduct the study, providing a comprehensive overview of the research design, data collection, and analytical procedures.

## 3.1 Research Design

Your research design.

## 3.2 Formula

## RESULTS AND DISCUSSION

This chapter presents the findings from the research conducted and provides a thorough analysis and interpretation of these results.

#### CONCLUSIONS AND RECOMMENDATIONS

This chapter provides the summary of the results obtained in this study and gives some recommendations for further investigation.

## 5.1 Summary of Findings

The study's findings address the initial research questions by confirming the effectiveness, reliability, and diverse applications of telemetry systems. The "Summary of Findings" section provides a concise overview of the key results from your research. This section should be factual and focus on presenting the data without interpretation. It should include:

Key Results:

Briefly summarize the most significant findings. Use bullet points or numbered lists for clarity if appropriate. Present the data as it was found, highlighting major patterns, relationships, or trends. Data Presentation:

Include tables, graphs, or charts that succinctly summarize the data.

Make sure each visual aid is clearly labeled and includes a brief description.

Coverage of Research Questions:

Address each of the research questions or hypotheses posed at the be-

ginning of the study. Summarize the results relevant to each question.

## 5.2 Conclusion

The "Conclusions" section interprets the findings and discusses their implications. This section should:

Interpret Findings:

Provide an interpretation of the data summarized in the previous section. Discuss what the results mean in the context of the research questions or hypotheses. Implications:

Explain the significance of the findings. Discuss how the results contribute to the field of study or practical applications. Limitations:

Acknowledge any limitations in the study that may affect the results or their interpretation.

## 5.3 Recommendations

The "Recommendations" section provides actionable suggestions based on the study's findings and conclusions. This section should:

Practical Applications:

Offer specific recommendations for practitioners, policymakers, or other stakeholders based on the findings. Future Research:

Suggest areas for further investigation that could address the study's limitations or build on its findings. Implementation:

Provide guidance on how the recommendations can be implemented effectively.
